SUMMARY

Backend Developer with practical experience in building and maintaining scalable web applications, specializing in Laravel, Golang, and API Development. Experienced in developing backend systems for the PARI (Pasar Rakyat Indonesia) and LOCALOKA platforms, including payment system integration, database management, performance optimization, and application security. Skilled in collaborating with teams, maintaining production servers, and providing end-to-end solutions from development to implementation. Also experienced as a Full Stack Developer and team leader in the creation of internal dashboards and reconciliation platforms.

TECHNICAL SKILLS

- Laravel
- Golang
- Lumen
- CodeIgniter
- Flutter
- Regular Expression
- Java Script
- PHP
- CSS
- HTML 5
- N8N
- Figma
- Draw.io
- Corel Draw
- Visual Code
- GIT
- Postman
- Termius
- Navicat

PROFESSIONAL EXPERIENCE

Bringin Inti Teknologi, PT Fullstack Developer

Nov 2025 - Present

Served as a Full-Stack Developer and Team Leader in the development and integration of systems for the Localoka and PARI platforms.

Key Responsibilities & Contributions:

- Led the development team in planning, task allocation, progress monitoring, and ensuring feature delivery stayed on schedule.
- Developing and maintaining application systems for the Localoka and PARI platforms and Create Service Payment Gateway.
- Handling integration with payment services such as Virtual Accounts, interbank transfers, and transaction settlement processes.
- Integrating systems with logistics/shipping APIs to ensure that order flow, shipping, tracking, and transaction status are automated.
- Manage databases (MySQL/PostgreSQL), including schema design, query optimization, and maintaining data consistency in production systems.
- Implement security layers using JWT, OAuth2, and Basic Authentication to protect API access and user data.
- Perform troubleshooting, maintenance, and performance optimization to keep the application stable and responsive.

Technologies

Languages & Frameworks: Laravel v8, Go (Gin, Echo), Viper

Database & Caching: MySQL, PostgreSQL, Redis, Cache

Security & Auth: JWT, OAuth2, Basic Authentication

Integration: Payment Services (VA, Interbank Transfer), Logistics API

Tools & Development Environment: Git, Microservice Architecture, Visual Studio Code, REST API, Docker, Postman.

Super Pasar Rakyat Indonesia, PT

Backend Developer

Mar 2024 - Nov 2025

Responsible for developing and maintaining the backend systems for the PARI (Pasar Rakyat Indonesia) application, a platform that supports digital transactions and marketplace operations. Involved in API development, payment integration, database management, and the development of the company's internal systems.

Key Responsibilities & Contributions:

- Developed and maintained the backend REST API to support the core features of the PARI application.
- Designed and managed database schemas, optimized queries, and ensured data consistency using MySQL and PostgreSQL.
- Implemented application security systems using JWT Authentication, OAuth2, and Basic Auth, and ensured endpoints were protected in accordance with security standards.
- Performing performance optimization on the backend application through caching using Redis and query improvement strategies to improve response times.
- Handling application maintenance, debugging, and resolving issues on the production system on a regular basis.
- Actively collaborate with the frontend team, QA, and stakeholders in developing new features and resolving technical issues.
- Developed internal office platforms—including the Internal Dashboard, Reconciliation Dashboard, and Filing Management System—as a full-stack developer to support the company's operational and administrative needs.
- Performed end-to-end testing and system validation prior to deployment to ensure features function according to requirements.
- Developed internal office platforms—including the Internal Dashboard, Reconciliation Dashboard, and Filing Management System—as a full-stack developer to support the company's operational and administrative needs.
- Conducted end-to-end testing and system validation prior to deployment to ensure features functioned according to requirements.
- Participated in server deployment, monitoring, and maintenance processes, including troubleshooting in the production environment.

Languages & Frameworks: Laravel v8, Go (Gin, Echo), Viper

Database & Caching: MySQL, PostgreSQL, Redis, Cache

Security & Auth: JWT, OAuth2, Basic Authentication

Tools & Development Environment: Git, Monolith Architecture, Visual Studio Code, REST API, Docker, CI/CD, Postman, Linux Server

Rynest Technology Indomedia, PT

Full Stack Developer

Aug 2023 - Mar 2024

Developed a web-based internship search information system platform called VOCAPEDIA, which aims to help students and job seekers find internship opportunities and streamline the recruitment process through an integrated system.

Key Responsibilities and Contributions:

- Leading end-to-end project development from planning, requirements analysis, and implementation through to system deployment.
- Designing and building the platform's UI/UX, including creating wireframes, visual designs, and user navigation flows to ensure they are intuitive.
- Designing and developing the application's business flows, ensuring processes such as user registration, internship searches, and application management run according to user needs.
- Coordinate directly with clients and stakeholders to gather requirements, provide progress updates, and ensure solutions meet business expectations.
- Perform database management, including designing table structures, optimizing queries, and maintaining data consistency.
- Manage team task allocation, monitor progress, and ensure effective collaboration as a Team Leader.
- Handle application maintenance, debugging, and system performance improvements after implementation.

Technologies:

Language: Laravel v10

Database: MySQL, Redis

Security & Auth: JWT, Basic Authentication

Tools: Git, Monolith, Visual Code

Glosa Media 62, PT
Full Stack Developer

Apr 2023 - Oct 2023

- Create CMS website pages (MEKAR LANGGENG PERKASA and MBREBES MILI)
- Design and develop landing page applications for the company's online marketing purposes.
- Work closely with the design team to ensure the appearance and functionality align with the company's brand.
- Conduct regular testing and maintenance to ensure the applications operate optimally and securely.

Technologies:

Language: CodeIgniter v3

Database: MySQL, Redis

Tools: Git, Monolith, Visual Code

Subaga Mitra Solusi, PT
Backend Developer

Mar 2019 - Jul 2023

Development some features Company Site. making it easier for users

- Development of SPK, Logistics, and Reporting features on the Company Website's internal system.
- Creating a master code with a plug-and-play mechanism that can be used by the team and new creative growth strategies.
- Ensuring that the data received by clients matches the data source.

Teknologi yang Digunakan:

Language: Laravel v9

Database: MySQL, Redis

Tools: Git, Monolith, Visual Code

EDUCATION

Nusa Mandiri University

Feb 2023 - Mar 2024

Information Systems.

- Thesis On "Web-Based Internship and Monitoring Information System Application at PT. Rynest Technology Indomedia".

Bina Sarana Informatika University

Apr 2017 - Sep 2020

Information Systems.

- Jurnal "Information System of Property Units Booking (SIPENITI) in PT. Haakon Inti Perkasa".

ADDITIONAL INFORMATION

- Languages: Indonesian, English
- Certifications: Flutter Advanced Training on WebHozz (No. 024/WH/FTA/IV/2022), Flutter Basic Training on WebHozz (No. 029/WH/FTB/II/2022)

PORTOFOLIO

Experienced in developing various web-based application solutions to support the business and operational needs of companies across various industries. Has experience in backend system development, payment gateway integration, monitoring dashboards, marketplaces, content management systems (CMS), point-of-sale (POS) systems, and logistics applications.

1. Marketplace Platform

- PARI (Pasar Rakyat Indonesia) Platform – PT Super Pasar Rakyat Indonesia
- Position: Full-Stack Developer
- Responsibilities:
 - Developing backend APIs and frontend applications.
 - Designing and managing databases.
 - Enhancing application security and performance.
 - Implementing business process workflows according to company needs.
 - Performing ongoing maintenance and feature development.
- Localoka Platform – PT Super Pasar Rakyat Indonesia
- Position: Developer Team Leader
- Responsibilities:
 - Lead the application development team.
 - Develop backend APIs.
 - Integrate payment systems (payment gateways).
 - Design and manage databases.
 - Designing and implementing business workflows.
 - Performing maintenance and feature development.

2. Barcode Scanning & Logistics System

- Designing and developing a barcode scanning application to support logistics processes, improve the accuracy of item tracking, and accelerate distribution and inventory processes.

3. Content Management System (CMS)

- PT Mbresbes Mili
 - Developed a CMS to streamline content management and company operations.
- PT Mekar Langgeng
 - Developed a responsive and user-friendly CMS to support efficient content management.

4. Landing Page & Digital Product

- PT Surya Logam Universal
 - Developed a product landing page to increase sales conversions for building materials.
- PT Haakon Inti Perkasa
 - Developing a property unit booking landing page to support marketing and sales activities.

5. Point of Sale (POS)

- Hasbelle Online Food (Founder)
 - Developing a POS system integrated with WhatsApp to support business transactions and operations.
- 3Abrade Coffee and Milk
 - Developing a stable and reliable POS system to improve operational efficiency.
- Laundry Management System
 - Developing a POS system specifically for laundry services with transaction and operational management features.

6. Dashboard & Monitoring System

- Internal Dashboard – PT Super Pasar Rakyat Indonesia
 - Developing an internal dashboard for logistics monitoring, real-time reporting, and document management.
- Reconciliation Dashboard – PT Super Pasar Rakyat Indonesia
 - Developed a reconciliation dashboard to accurately match bank statement data with the company's database.
- Vocapedia – PT Rynest Technology Indomedia
 - Developed an internship program monitoring platform to support data-driven evaluation and reporting processes.

7. Payment Gateway & Financial Integration

- Sunarisa Speaking School
 - Implemented a payment gateway integration using Midtrans as the online payment method.
- Localoka & ETWPAD Platform
 - Developed an internal payment gateway service integrated with Bank BRI to support secure and efficient transaction processing.

Role: Full-Stack Developer

Tech Stack: Laravel, Next.js, MySQL, Redis, Docker, Nginx

Developed the REST API and frontend for the marketplace application.

Designed the database and optimized query performance.

Implemented authentication, authorization, and application security.

Developed new features and performed system maintenance.
